

File Manager

Using the file manager you can interact with your server's files in an intuitive way. Much like you can interact with files and folders on your desktop, You can interact the same way on our file manager

You have the ability to:

- Right click : Opens a context window for more options
- Upload files to your server either with upload window, or you can drag & Drop files into the file manager window (150mb limit)
- Compress files into a tar.gz file for easier downloading & moving of files,
- Decompress tar.gz, and windows .zip files, (not compatible with .RAR)
- Download files from your server onto your local machine

Permissions

You don't usually have to touch permissions, but in the odd case that you do. Here is a good article explaining it
